

Prime Ring Problem

A ring is composed of n (even number) circles as shown in diagram. Put natural numbers $\{1, 2, \dots, n\}$ into each circle separately, and the sum of numbers in two adjacent circles should be a prime.

Note: the number of first circle should always be 1.

Input

n ($0 < n \leq 16$)

Output

The output format is shown as sample below. Each row represents a series of circle numbers in the ring beginning from 1 clockwise and anticlockwise. The order of numbers must satisfy the above requirements.

You are asked to write a program that completes above process.

Sample Input

6

8

Sample Output

Case 1:

1 4 3 2 5 6

1 6 5 2 3 4

<empty line>

Case 2:

1 2 3 8 5 6 7 4

1 2 5 8 3 4 7 6

1 4 7 6 5 8 3 2

1 6 7 4 3 8 5 2

<empty line>
